

Distinguish between new and old versions of IMU

The k210 development board has changed the IMU model. The source code of the new and old versions is incompatible. The new version of the gyroscope model is **icm-40607**, while the old version is **icm-20607**

The following explains how to distinguish between new and old models of IMU.

New version

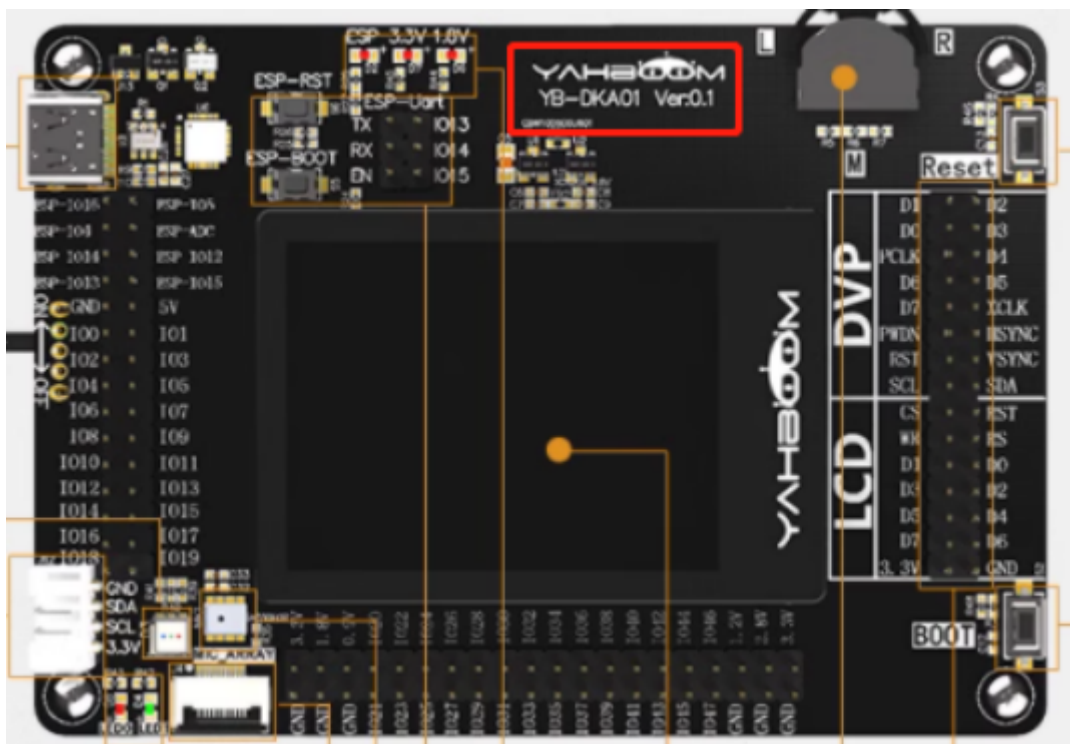

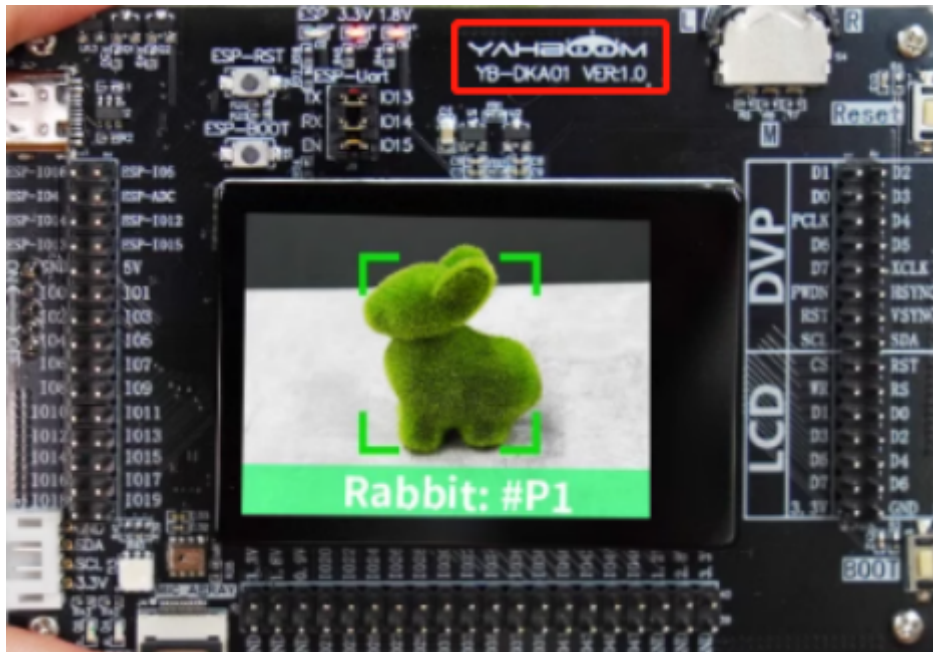

The silk screen of the k210 square board is V1.1, and the silk screen on the back and front has the hardware version, as shown in the figure below

This version of the test firmware needs to download **k210testV2.7 or above**

Old version

The screen print of the k210 square board is V1.0 or V0.1, as shown in the figure below

This version of the test firmware needs to download a version below **k210testV2.7**
